PREMIUM ROOF VENTILATION.

The background image shows the interior of a motorhome. A large, rectangular skylight is centered on the ceiling, surrounded by a white frame with integrated LED lighting. Below the skylight, a circular AirPlus fan unit is mounted. The ceiling is white with recessed lighting strips. On the right side, there are white storage cabinets. In the foreground, a bed with a white patterned duvet and several pillows is visible. The overall atmosphere is bright and modern.

FREEDOM

IN COMFORT

The AirPlus fan redefines motorhome and caravan ventilation systems by offering a comprehensive solution that integrates a vent, fan, and blind protection into a single unit. Available in Black, White, or Smoke lid finishes, its sleek, low-profile design elevates any interior while providing essential climate control.

Functionality is seamless with ten speed settings, reversible airflow, and an intelligent auto-mode that adjusts to internal temperatures. The unit is fully equipped with integrated LED lighting, a built-in fly screen, and a blackout blind. Controlled via a touch panel or remote for motorized operation, the AirPlus range delivers a premium, all-weather solution for modern mobile living.

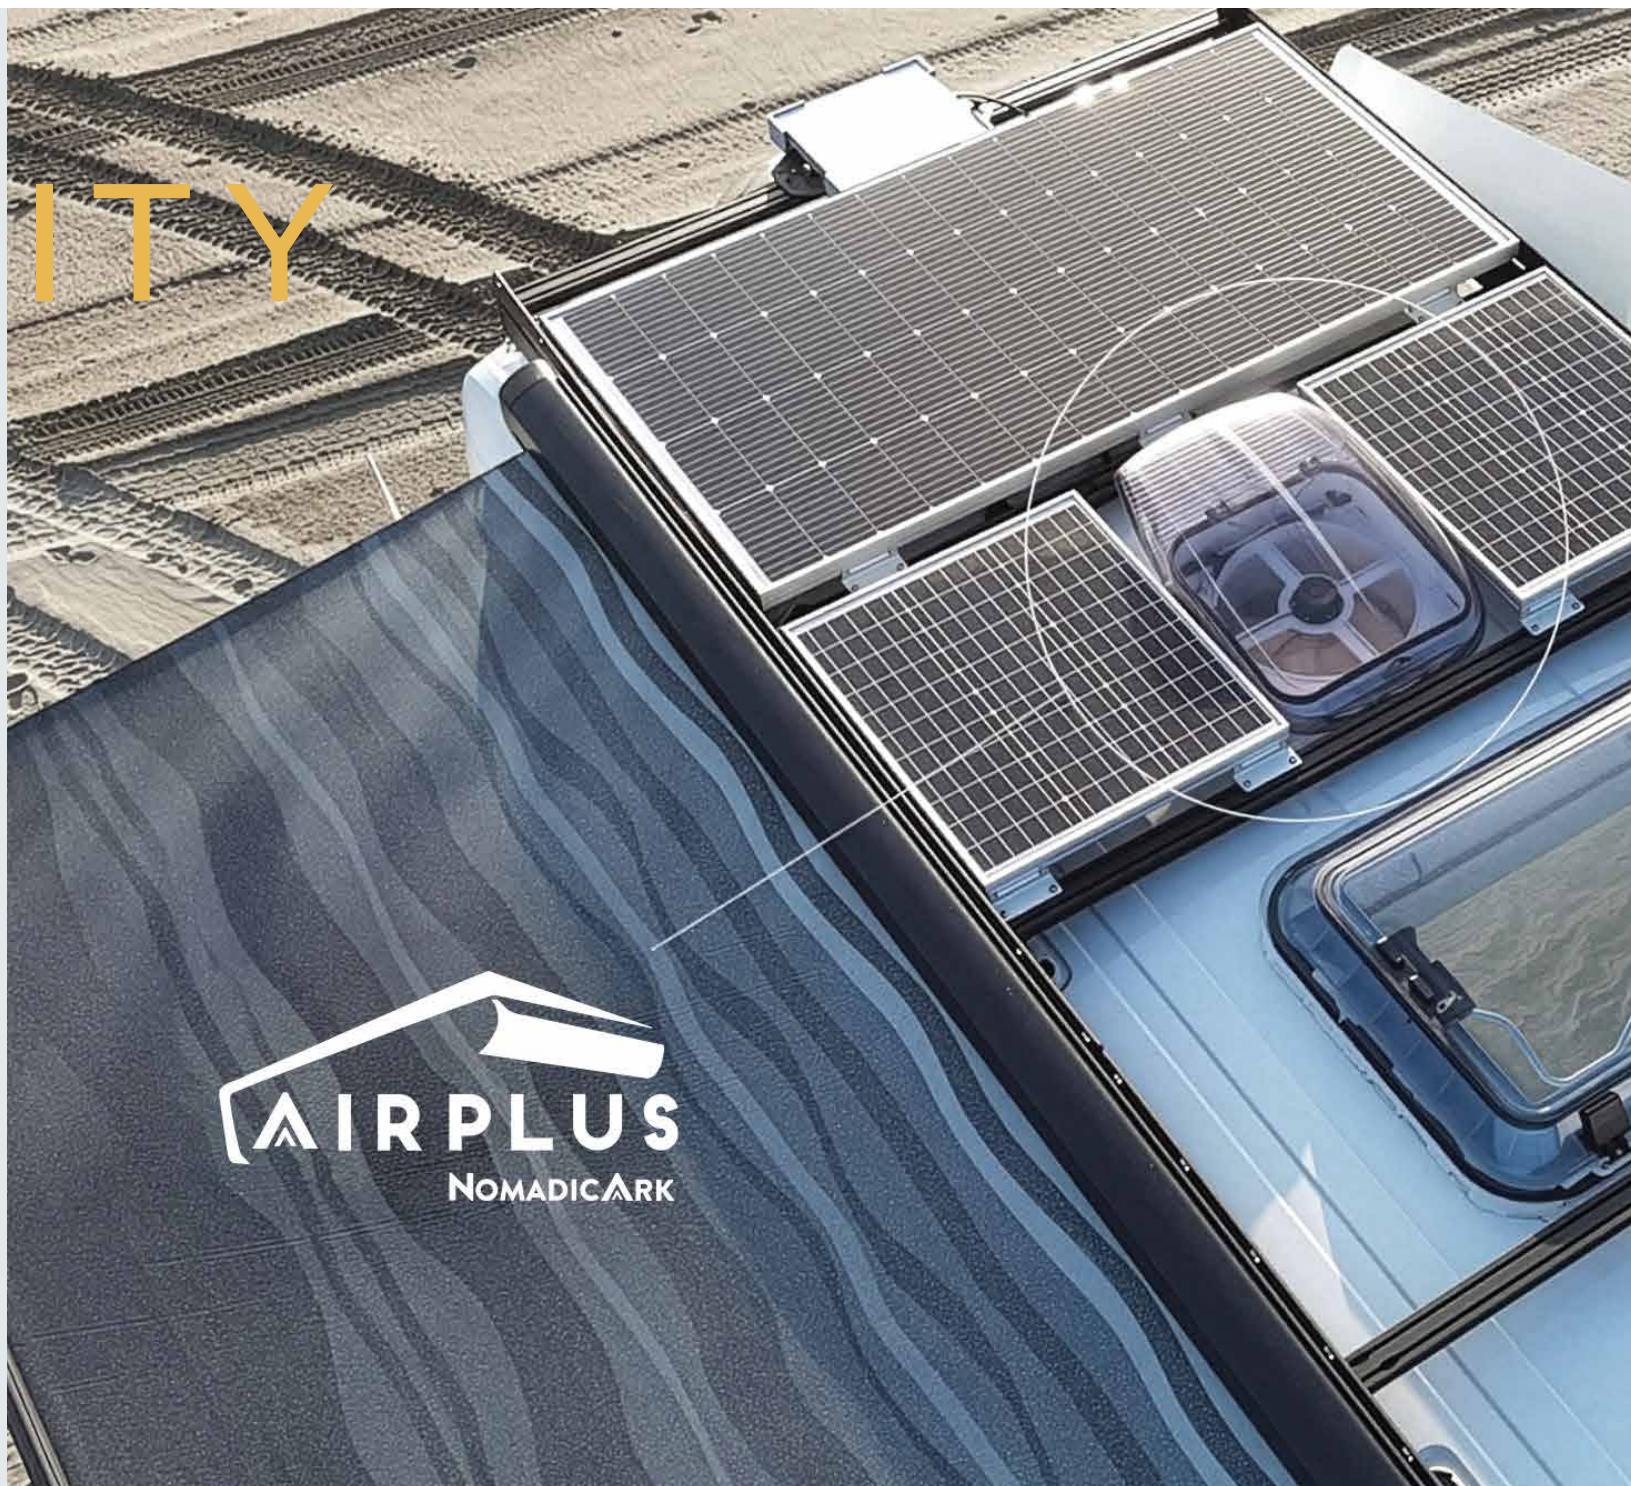

ALWAYS QUALITY

The AirPlus is engineered using high-quality, durable materials designed to withstand the demands of life on the road. Its robust construction and precise build quality mean it won't just look good - it's built to perform reliably for years to come. With a finish that resists wear and UV damage, the AirPlus offers a premium feel both inside and out.

Thanks to its carefully selected materials, the AirPlus is lighter than many comparable fans. This makes installation easier and reduces the weight carried on your vehicle, helping improve fuel efficiency and keeping overall vehicle load down.

The compact, low-profile design fits seamlessly onto any vehicle without dominating the roof space. This footprint makes it ideal for smaller campers or builds where every bit of space matters, giving you more room for solar panels, racks, or other rooftop gear.

With a streamlined, aerodynamic profile that reduces wind resistance when driving. Its curved shape not only improves the vehicle's efficiency by minimizing drag but also helps reduce road noise compared to bulkier rooftop units. It's a sleek, thoughtful design that works as well in motion as it does when parked.

VARIABLE AIR SPEEDS

Get precise airflow control with 10 adjustable fan speeds, allowing you to fine-tune your environment for ultimate comfort whether you need a gentle breeze or maximum ventilation.

ULTRA QUIET OPERATION

Relax without the noise. Thanks to its innovative design, the AirPlus operates at an impressively low noise level – just 53dB at full power, and even quieter at lower speeds – making it one of the quietest fans available for campervans and motorhomes today.

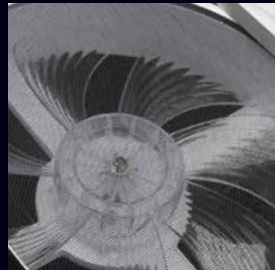

BRUSHLESS MOTOR

Powered by a high-efficiency brushless motor, known for its outstanding reliability and long service life. With fewer moving parts than traditional motors, a brushless design means less wear and tear, smoother operation, and consistent performance over time.

HIGH CAPACITY VENTILATION

Need to freshen up the air inside or extract stale air out? The AirPlus can exchange up to 3000 cubic m/h - significantly more than other fans. It also works both ways, offering powerful intake and exhaust modes. Plus, with the automatic temperature control mode, the fan will adjust itself based on the cabin temperature – giving you smarter, hassle-free climate control.

SIMPLE INSTALL

Designed with ease of installation in mind and sized for roof openings of 355mm/400mm, this makes it a direct replacement for many existing vents without the need for extra modifications. The unit accommodates a wide range of roof thicknesses - from 27mm up to 80mm - thanks to an adjustable inner frame system. All essential mounting hardware is included, and the electrical wiring is simple, connecting directly to a standard 12V power supply with clearly marked leads for an easy, fuss-free hookup.

The low-profile base and pre-drilled mounting flange make aligning and securing the AirPlus quick and accurate. A built-in foam gasket provides a tight seal against water ingress, reducing the need for messy sealants. Inside, the interior bezel easily clips into place after wiring and fixing, creating a clean, professional finish without complex trimming or adjustment.

DELUXE AS STANDARD

No hidden extras, no costly upgrades – the AirPlus gives you everything you need straight out of the box.

With integrated LED lighting, a sleek pleated blind, and a protective flyscreen, all standard features. It's one complete solution designed to deliver comfort without compromise.

EFFORTLESS CONTROL

Flexible control options - whether through the built-in touchpad, the supplied remote control, or a Bluetooth-connected smartphone app - making it simple to integrate smart ventilation into any build.

The AirPlus app allows you to adjust fan speeds, set your preferred thermostat temperature, and choose between warmer or cooler airflows. Activate Auto Mode with ease to let the fan intelligently regulate the temperature.

LOW POWER CONSUMPTION

Engineered for exceptional energy efficiency, consumption is less than 20W at its highest fan speed and just 4W when operating the integrated LED lighting. This low power draw is particularly advantageous for off-grid setups, allowing users to maintain optimal ventilation and lighting without significantly impacting their battery reserves. Whether running on solar power or conserving battery life during extended trips, the AirPlus ensures energy resources are used judiciously.

With similar fans drawing over 30W at maximum speed, the AirPlus offers a more energy-conscious solution. This efficiency translates to longer operation times and reduced strain on your power systems, making it an ideal choice for those who prioritize energy conservation without compromising on performance.

Large ventilation

Low noise

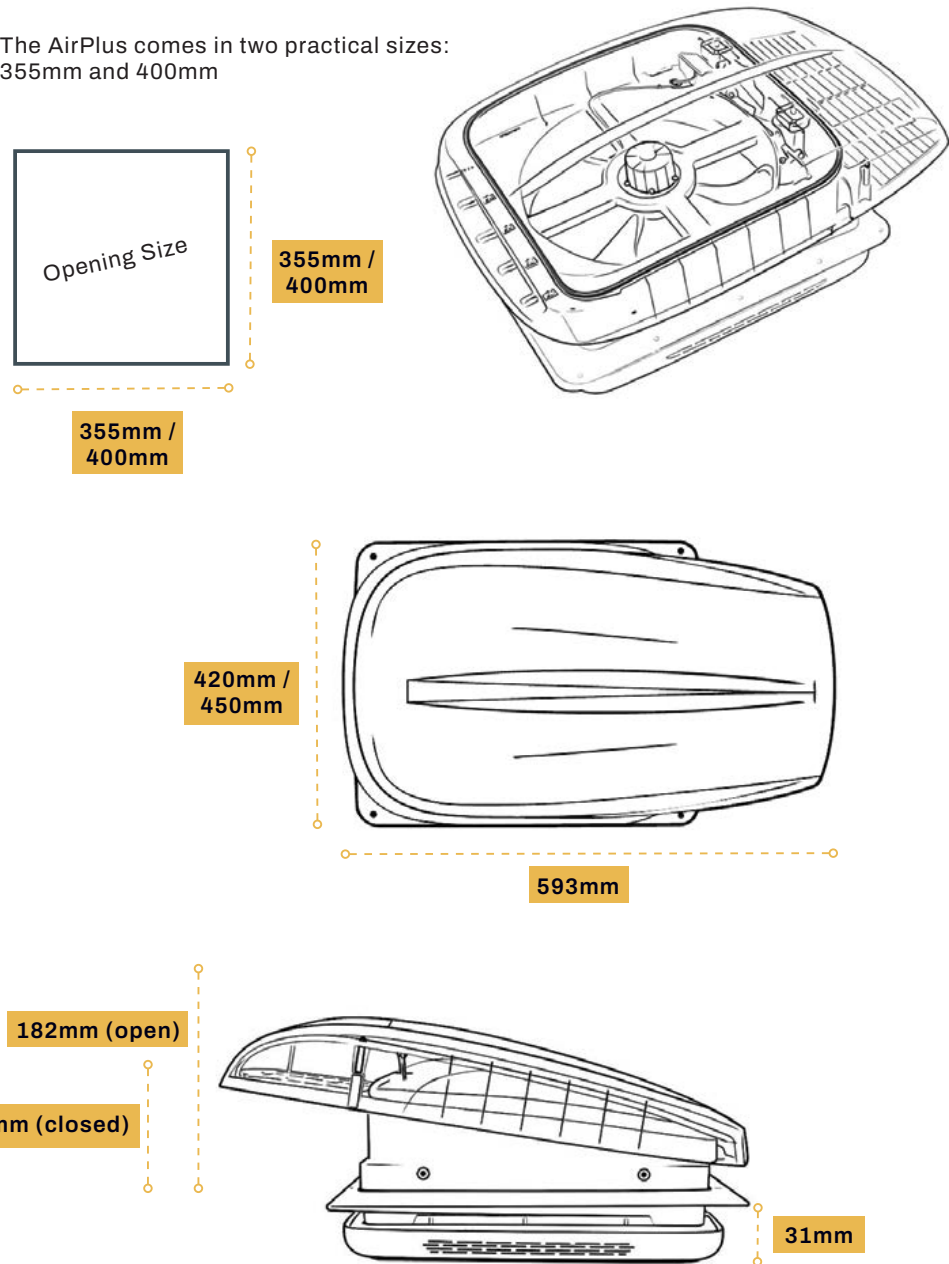

Energy conservation

TWO SIZES

The AirPlus comes in two practical sizes: 355mm and 400mm

COLOURS

Choose from three distinct dome color finishes: Smoke (tinted), White (opaque) and Black (opaque), and two interior colours.

BLACK EDITION

New for 2026 and featuring a sophisticated all-black interior. Designed for a seamless and stylish installation our Black Edition is for those who demand a truly sleek and integrated look. Making it the perfect choice for an aesthetic-focused installation.

A NEW STANDARD

At NomadicArk we believe in creating experiences that are shaped by the way we live. This is in everything we do.

We've built a wealth of knowledge that we pour into each product to provide the features, quality, compelling experience and value the market demands. Our customer-oriented approach means we pay attention to the smallest details to provide attractive and useful products to the trade conversion market.

The strong B2B partnerships we form incite and inspire our future plans, and we're proud of how this focus fosters customer loyalty and repeat business.

PRODUCT QUALITY

To maintain the NomadicArk brand's reputation for quality, we only source from trusted and professional manufacturers.

RELIABLE SERVICE

Leveraging the needs of a large customer base, we're able to secure exceptional service from our suppliers.

SUPPLIER RELATIONSHIPS

Our team proactively visits suppliers' facilities to assess their control procedures and foster collaboration.

INNOVATIVE SOLUTIONS

Our global reach across diverse markets allows us to combine insights and inspire innovative solutions.

SAFETY STOCKS

We can hold large safety stocks to provide peace of mind and mitigate potential supply chain disruptions.

STRONG ARCHITECTURE

We've made significant investment into our proprietary supply control management systems.
